

*Disinfection with Ultraviolet Systems is the process for making microorganisms inactive without adding any chemical or oxidant to water. This ultraviolet light breaks DNA structure of microorganisms and makes them inactive unaffected. By this way, %99,9 average ratio of disinfection productivity is supplied..*

To be able to kill microorganisms with this system, Ultraviolet light must directly hit over them. For this reason, before water enters in ultraviolet system, parameters such as sediment, cloudiness must be removed from water. Sand filter or cartridge filters are recommended to be used before ultraviolet.

To obtain good productivity from ultraviolet units, periodical maintenance is important. UV lamp change once a year and periodical Quartz glass cleaning depending on raw water quality must be made. In case, if this cleaning is not done, UV light affect and output of equipment will decrease.

ULTRAVIOLET SYSTEMS SPECIFICATIONS	E PRO	E PLUS	ES
Body: SS 304 Stainless Steel	•	•	•
Power Supply: 220 V 50 Hz	•	•	•
Operation Pressure: 8 Bar	•	•	•
Lamp Life: 9000 Hours	•	•	•
Lamp Brand: FIRSTLIGHT (ISO 9001 Certified)	•	•	•
Fault Indicator (E-50 Panel not Included)	•	•	•
Analog Operating Clock (E-50 Panel not Included)	•		
Electronic Operating Clock		•	•
Voice Fault Report		•	•
Alarm Relay Outlet		•	•
Warning when the Lamp Life is over		•	•
